

Dropbox

for iPhone

This app allows you to access your Dropbox on the go, view your files, save them to your phone, and even take photos and videos that sync instantly online and across computers!

Viewing Files

Now you can view files that are in your Dropbox right on your iPhone! Need to review a slide deck but don't have your computer with you? Dropbox has you covered. Want to read a report that

someone from work just shared with you? No problem. Want to listen to music or watch videos that are stored in your Dropbox? That works too.

Sharing Files

Sharing files with people from the iPhone app couldn't be simpler. Just press a button to email a link to the file.

Favorites

When you mark a file as a “favorite”, the file automatically downloads and saves to your iPhone for fast access and offline viewing. The app also lets you know when a document is out-of-date, and you can sync to the latest version with the press of a button.

Galleries & Photo/Video Uploads

The Dropbox app automatically recognizes images in your Dropbox, and lets you view them as a photo gallery. Just find an image in the file browser, and touch it to enter gallery view.

You can also use your phone’s built-in camera to take photos or videos and upload them instantly to Dropbox. When you use this feature together with Dropbox shared folders, these files are instantly shared with friends and family and synced to their computers!
